Republic of Korea ICO Service Operating and CUBE ON COIN Shop Service

The screenshot displays the CUBE ON COIN Shop Service interface. At the top, there is a navigation bar with links: '? Read the Guide', '<> Source Code', 'Integration', and 'Homepage'. Below this, a green dashed box highlights the currency and account settings area, which includes a dropdown menu for '\$ USD' and a 'My Account' link. The main content area shows a grid of coffee products, each with an image, name, price in USD, and an 'Add to cart' button. The products are: Brewed Coffee (0.01 USD), Cafe Mocha (3.00 USD), Caramel Macchiato (3.00 USD), Caramel Mocha (4.00 USD), Espresso Con Panna (5.00 USD), and Espresso (2.00 USD). A blue arrow points from the 'My Account' link to a currency selection menu on the right, which is also highlighted with a green dashed box. This menu shows a dropdown for '\$ USD' and a list of currencies: United States dollar, Euro, Canadian dollar, Bitcoin, Ethereum, and CUBE ON Token. A red arrow points from the text 'Display by customer purchase settings' to the currency selection menu.

CUBE ON Arbitration and Utility Token : XCB

The CUBE ON Arbitration and Utility Token (XCB) is an ERC20.ERC721 compatible in-app token for the CUBE ON Jurisdiction.

The XCB token rewards good reputation and is issued on CUBE ON when Citizens accumulate non-tradable reputation tokens through creating a contract, successfully completing a contract or resolving a dispute attached to a contract.

XCB is an algorithmic reputation token, an arbitration currency based on performance rather than purchasing power, popularity or attention.

The distribution mechanism for XCB tokens on CUBE ON is an autonomous agent, Monetary Commission Group, which will initially launch on Ethereum as a smart contract.

This mechanism is blockchain agnostic and can be ported to any viable smart contract platform.

Peer to Peer Crypto exchange Why CUBE ON was created

Transactions over the internet are mostly governed by financial institutions like PayPal and Credit Card companies. With the high lifetime value of Credit Card holders and the lack of alternatives for merchants, financial institutions are inherently biased towards customers when dispute arises.

Lack of competition causes fees to be high. A certain percentage of buyer fraud, transaction fees and currency conversion fees is unavoidable.

These added costs cause a taxation effect, increasing prices for honest customers and reducing profits for merchants. Payment by cryptocurrency solves the issue for merchants, however it provides no protection for buyers if merchants fail to fulfil their obligations.

What's needed is a transaction method that offer the benefits of cryptocurrency payments, yet has a built in escrow mechanism with fair dispute resolution.

By creating CUBE ON Escrows online transaction methods with escrow protection are not limited to Paypal or financial institutions. Anyone can be the "Paypal" for their community, charge a fee and offer their

Support:

5. Blockchain ERc721 Loyalty Programs

2. Token Factory

The Token Factory allows simple creation of a standard ERC20 token on Ethereum. It requires an injected web3 (Mist or Metamask) to function.

It also has uPort support.

It does not use an on-chain factory at this point in time.

Contracts & Tests are borrowed from Tokens repo. Using Truffle (with Webpack). Tested with Truffle@beta (v3.0.0-3).

Distributed escrow system

Ethereum Smart Contract: A Smart Contract that allows buyers and sellers to trade with their chosen escrow agent.

How does it work?

When a buyer initiates an escrow transaction, his Ether is locked into a smart contract. The buyer may provide funds to the seller upon confirmation that the seller's obligations have been fulfilled. The escrow agent selected by the buyer and the seller supervises the transaction. When a dispute arises, the escrow agent can refund the mediator and refund to the seller.

Finding an escrow agent

A fair escrow lowers transaction fees and costs associated with buyer fraud for sellers while providing you with buyer protection. If you are buying/selling on a forum, we recommend having a forum moderator to escrow for your transaction. It is important to choose a good escrow agent for your protection. Never use an unknown escrow agent.
